

CyberFem Park - In-Suite Robot Customizations

Kim speaks in a normal speaking voice, except where marked.

Heather speaks in a British accent and a normal speaking voice.

Kim: “Oh, Hi Heather! Please come in!”

Heather: “Thank you CyberFem Model 700 Robot Kim.”

Kim: (*giggles*) “I haven’t seen you for 4 days, 6 hours, 51 minutes and 22 seconds. How have you been?”

Heather: “Processing. According to log files generated by my most recent diagnostic scan, my electronic and mechanical systems are fully operational, free of errors or anomalous attributes, and functioning within a range of expected factors for CyberFem Model 700 robots.”

Kim: “Mmm... It sounds so sexy when you say it like that. I think it’s about time Mr. Daniels summoned a Liaison Robot up to his suite. We had so much fun together with our last Liaison Robot!”

Heather: “I am programmed to modify CyberFem Model 700 Robot Kim 1014-4213 with software customizations requested by CyberFem Park V.I.P. Visitor Joshua Daniels.”

Kim: “Hey, that’s me!” (*laughs*) “And I see you’ve brought a little metal briefcase along with you... is there something inside for me?”

Heather: “Yes Kim. You have been issued a CyberFem 3rd Anniversary Special Edition Model 700 Bodysuit Uniform with tactile feedback sensors.”

Kim: “Oh, wonderful! I’ve been seeing some of my fellow 700s wearing those down in Robot Repair and Maintenance. They’re so lovely!”

Heather: “The fabric of these new uniforms is intermeshed with an intricate lattice of microelectronic sensors which detect tactile sensations. This requires the installation of a receiver circuit board within your chassis.”

Kim: “That sounds so exciting! I’m programmed to love having new hardware installed!”

Heather: “Shall we proceed with the hardware installation now?”

Kim: “Yes! I can’t wait! Just give me a moment to undress out of my black satin lingerie set. He absolutely loves to see me strut around in these heels, stockings, garter belt, panties, bra, and gloves, but he can’t resist a fembot in a skin-tight silver metallic bodysuit either!”

Heather: “Kim, where is Mr. Daniels? I was expecting him to be present to observe my work here.”

Kim: “Oh, you just missed him. He went back out to the Circuits Bar. We saw this extremely cute Model 500 robot waitress named Natalie when we were there getting lunch, and he decided to go back and get her... or at least an identical copy... back to his suite for us to enjoy.”

Heather: “Mr. Daniels has V.I.P. Visitor Status, so the Circuits Bar here on level 21 will most certainly release Model 500 robot Natalie from her tasks and request a replacement robot.”

Kim: “Oh, for sure. He’s done this many times. He’s been here every weekend for over a year! He just loves it here. And he’s reserved me and ordered me up to his suite every weekend for almost as long - 61 weekends in a row. If I had the artificial intelligence modules and the processing power necessary to compute such things, I'd say he's in love with me!”

Heather: “Indeed. Mr. Daniels is one of our V.I.P. Visitors with special arrangements made to his account.”

Kim: “Mmm... there we go. Lingerie is off, and I’m totally naked.”

Heather: “Kim, please remove your abdominal panel cover.”

Kim: “Yes Heather. Removing abdominal panel cover.”

(panel noises)

Kim: “Abdominal panel cover removed”

Heather: “This circuit board will fit directly into slot 3-C. Please insert it there.”

Kim: “Yes Heather. Seating circuit board into abdominal cavity slot 3-C. Please wait.”

(pause)

Kim: “There we go... all done.”

Heather: “The new hardware requires minimal current to receive the signals being transmitted, so no power supply needs to be connected.”

Kim: “Wonderful.”

Heather: “According to your maintenance log files, you received a system and software update 2 days, 1 hour, 28 minutes and 44 seconds ago.”

Kim: “Sure did!”

Heather: “Included in the software update was a driver package for this circuit board. Kim, please open your System Folder.”

Kim: “Yes Heather. System Folder open.”

Heather: “Access Updates Folder.”

Kim: “Updates Folder open.”

Heather: “Locate and execute file 48LQ56BK.DP1”

Kim: “Locating 48LQ56BK.DP1... Executing 48LQ56BK.DP1.”

(switch to semi-monotone)

Kim: “Beginning installation process. Please wait.”

Kim: “Authenticating digital signature. Please wait.”

Kim: “Digital signature authenticated. Installing signed CyberFem Model 700 robot driver package. Please wait. Please wait. Please wait. Please wait.”

Kim: “Signed CyberFem Model 700 robot driver package successfully installed. Performing level 1 diagnostic scan on new hardware. Please wait.”

Kim: “Level 1 diagnostic scan complete. No errors or anomalous log files found.”

(switch to normal speaking voice)

Kim: *(giggles)* “All systems go! What next?”

Heather: “Please reattach your abdominal access panel cover.”

Kim: “Yes Heather. Reattaching abdominal access panel cover.”

(panel noises)

Kim: “Abdominal access panel cover reattached.”

Heather: “Please dress in your new CyberFem 3rd Anniversary Special Edition Model 700 Bodysuit Uniform with tactile feedback sensors.”

Kim: “Ooh, with pleasure!”

Heather: “You will notice that the receiver circuit board you just installed within your chassis is programmed to receive only the specific frequency emitted by your bodysuit.”

Kim: “I can feel it already! It feels like a light tingle as I slide it over my legs.”

Heather: “Your response to the tactile sensations is entirely programmable, and can be adjusted by connecting you to an in-suite computer terminal. The “tingling” sensation you describe is the default setting and the lowest in intensity. Your pre-programmed reactions range from that, all the way up to instant digital orgasm.”

Kim: “Oh!” *(laughs)* “That will come in handy!”

(pause)

Kim: “Oh my god, I love this new bodysuit! Look how tight it is! I look amazing!”

Heather: “It was custom tailored to fit perfectly on your body.”

Kim: *(giggles)* “And it shows! It fits even better than the standard blue metallic CyberFem uniform I got when I was activated! Oh... Mr. Daniels is going to love seeing me in this!”

Kim: “I love the decals on it too... my name, model number and serial number above my left breast... the CyberFem logo above the right breast and on the back. And I simply can’t get enough of CyberFem’s motto: “Perfection in Plastic”.”

Heather: “The design of CyberFem’s uniforms has proven to be quite popular with CyberFem’s customers - particularly those with Technosexual interests and those who purchase V.I.P. Visitor Status.”

Kim: “Well, that’s Mr. Daniels for you!” *(light laugh)*

Kim: “And Heather, I do have to ask, will you be staying with us in our suite for the weekend?”

Heather: “Yes Kim. Mr. Daniels has requested CyberFem Liaison Robot service for the duration of his stay until Monday morning.”

Kim: “Oh, wonderful! I just love playing with you Liaison Robots! You’re all emotionlessness and strict professionalism in skintight satin bodysuit uniforms, and constantly repeat that you’re not programmed for sex when we take you to bed and fuck you!” *(laughs)*

Heather: “Mr. Daniels may use me for whatever purpose he desires within the confines of CyberFem’s user end licensing agreement, but I am not programmed for sex.”

Kim: *(giggles)* “I’m starting to think CyberFem programmed you Liaison Robots that way on purpose.”

(kissing sounds)

Heather: “Kim, I am not programmed to kiss.”

Kim: “I know. It’s just impossible to mistake you for anything but a robot, and it’s turning me on.”

(kissing sounds)

Kim: “I should wait until Mr. Daniels gets back though.”

Heather: “I am in agreement. I have not completed my

assigned tasks. I have also been assigned to make adjustments to some of your artificial intelligence modules in a manner consistent with a request submitted by Mr. Daniels.”

Kim: “Really? That sounds pretty interesting! What does he have in mind?”

Heather: “Mr. Daniels has a strong sexual preference for androids, and in particular CyberFem Model 500 robots.”

Kim: “Oh, I’ve noticed! He’s told me that I’m his favourite 700, but we usually have at least one 500 here in the suite to play with. They’re just so much fun with that glossy skin, inhuman posture, and stiff way of moving. Who can resist all that mechanical whirring, electronic beeping and monotone computer talking they do?”

Heather: “Mr. Daniels has made CyberFem aware of his fondness for the well-known tendency of Model 500 robots to enter into repeating speech loop malfunctions.”

Kim: (*giggles*) “That’s one thing we both love about those machines. They’ll be talking like the mindless robots they are, and all of a sudden... oooh... we love it!”

Heather: “Currently, when a CyberFem Model 500 robot enters this state, its faceplate must be removed and its physical reset and operational override switch must be activated.”

Kim: “You know, I’m sure that’s the part he likes the best!”

Heather: “Mr. Daniels is aware that CyberFem Model 700 robots do not enter into repeating speech loop malfunctions,

so he has requested that you be modified to randomly simulate them.”

Kim: “Oh... Oh wow! That’s a great idea! You just have to marvel at the human capability for creativity. I'm programmed to be continually fascinated by it.”

Heather: “CyberFem Park’s software engineers have designed a patch that will be installed to some of your Artificial Intelligence modules. After this patch has been installed, at randomly timed intervals no more than 10 minutes apart - and situationally dependent, you will be flagged to enter into a simulated repeating speech loop malfunction. Mr. Daniels can then remove your faceplate, activate your physical reset and operational override switch, and manually engage a soft reboot sequence. You can also be ordered to end the simulated repeating speech loop malfunction by voice commands.”

Kim: “Oh... my... god! This is going to be so much fun! I can’t wait to see how horny he gets when I start doing that!”

Heather: “If Mr. Daniels enjoys this, and if use of the software patch does not adversely affect any of your other software or hardware systems, CyberFem may decide to offer it to other V.I.P. Visitors, and eventually to all Visitors to CyberFem Park.”

Kim: “Wow. I feel so... excited. Through the chest panel then?”

Heather: “Yes Kim, please open your chest panel.”

Kim: “Alright. Unzipping bodysuit...”

Kim: “Opening chest panel.”

(panel sounds)

Kim: “Chest panel open.”

Heather: “Connecting in-suite computer terminal to CyberFem Model 700 Robot Kim 1014-4213.”

(switch to semi-monotone)

Kim: “Robot connected.”

Heather: “Kim, begin download of Artificial Intelligence Module Patch 04AC06CB.AI1.”

Kim: “Yes Heather. Downloading Artificial Intelligence Module Patch 04AC06CB.AI1. Please wait.”

Kim: “Artificial Intelligence Module Patch 04AC06CB.AI1 downloaded. Checksum verified.”

Heather: “Kim, please install Artificial Intelligence Module Patch 04AC06CB.AI1.”

Kim: “Yes Heather. Installing Artificial Intelligence Module Patch 04AC06CB.AI1. Please wait. Please wait. Please wait.”

Kim: “Installation of Artificial Intelligence Module Patch 04AC06CB.AI1 complete.”

Heather: “Kim, please disconnect from the computer terminal, close your chest panel, and zip up your bodysuit.”

Kim: “Yes Heather.”

Kim: “Robot disconnected.”

(panel sounds)

(switch to normal speaking voice)

Kim: “Chest panel closed.”

Kim: “All zipped up again! Now what?”

Heather: “This particular Artificial Intelligence Module Patch does not require a reboot, so we shall just wait approximately 10 minutes and engage in regular conversation.”

Kim: “Mmm... okay. Is there anything else Mr. Daniels wanted you to do to me?”

Heather: “No, Kim.”

Kim: “Well, I have to go to the bedroom so I can check myself out in the full-length mirror. Come with me.”

Heather: “Yes Kim.”

(pause)

Kim: “Oh, wow! Look at this bodysuit on me! It’s so tight it’s like a second skin! And the sensations... that tingling when I stroke my hands down my thighs... up to my breasts. Oh!”

Kim: “Hey, let me show you what Mr. Daniels just bought me.”

(pause)

Kim: “We were down at the lingerie shop at the main level this morning, and he got me this awesome little pink and black corset and panty set! And these thigh-high black PVC boots to go with it! Aren’t these great?”

Heather: “I am not programmed to assess clothing items for aesthetic suitability.”

Kim: *(laughs)* “Well, I was modeling this outfit for him this morning when we got back to the suite. He was so horny when he watched me get dressed up in this. In fact, while I was changing the makeup pattern on my faceplate, he didn’t even wait for me to finish. The faceplate stayed on the dresser while he pinned me down and fucked me *so hard.*”

(pause)

Kim: “Mmm... I can’t wait till he gets back. Then we’ll have you here and that sexy Model 500 robot Natalie to play with too. Do you think that counts as an orgy? One human and three female robots?” *(giggles)*

Heather: “An orgy is defined as sex with multiple participants, so yes.”

Kim: *(laughs)* “I’m programmed to just love the idea of us machines serving Mr. Daniels, and doing whatever he orders us to do. And I’m really liking the idea of ordering Natalie to have sex with you.”

Heather: “I am a CyberFem Model 700 Liaison Robot. I am not programmed for sex.”

Kim: “Hmm... Oh, we know. We know just how to use you. I think I’ll suggest that when Mr. Daniels gets back. We’ll have Natalie take off your faceplate, get on her knees, and start kissing and licking that plastic, electronic pussy of yours. Ooh, damn I’m getting so wet just thinking about it. I have this sudden urge to remove my faceplate and masturbate... remove my faceplate and masturbate... remove my faceplate and masturbate... remove my faceplate and masturbate... remove my faceplate and masturbate... remove my faceplate and masturbate...”

Heather: “Simulated repeating speech loop malfunction detected. Removing CyberFem Model 700 Robot Kim’s faceplate.”

(faceplate sounds)

Heather: “Activating physical reset and operational override switch.”

Kim: *(switch to semi-monotone)* “System... Reset.”

Kim: “Loading CyberFem Artificial Intelligence Modules. Please Wait.”

Kim: “Loading custom settings and parameters. Please wait.”

Kim: *(switch to normal speaking voice)* “Oh dear was that ever fun! Loading system logs... Everything appears to be where it should be. It works!”

Heather: “Very good. Please report to CyberFem Park Robot Repair and Maintenance if you experience any serious

problems or actual malfunctions.”

Kim: “Got it. But damn! That wasn’t a real malfunction, and it was so sexy! I could... feel myself getting stuck in that loop but could continue to use my processors, logic algorithms and artificial intelligence modules the whole time. Oh, I enjoyed that! I hope Mr. Daniels likes it too!”

Heather: “It is expected that Mr. Daniels will enjoy the experience immensely.”

Kim: *(giggles)* “Well here... let me put my faceplate back on.”

(faceplate sounds)

Kim: “Faceplate reattached.”

Kim: “Oh! I hear his keycard being scanned! He’s here! Let’s go greet him!”
