

(monotone voice)

Hello, CyberFem Park customer. My name is Kim. I will be your robot for the evening. May I come in?

(pause)

Processing... Yes Master. I will address you as Master. Shall we begin the in-suite product demonstration you requested?

(pause)

Are you satisfied with my appearance?

(pause)

You are correct. I am an extremely attractive robot. I was designed and manufactured to possess a high degree of physical attractiveness. Do you like my uniform?

(pause)

My purple metallic lycra bodysuit is skin-tight, and it accentuates the feminine curves built-in to my plastic body. Do you enjoy seeing the contours of my nipples and my genitals through the fabric? Feel them. My parts were designed to be quite realistic.

(pause)

As you can see from the identification text below the CyberFem logo on my bodysuit, I am a CyberFem Model 500 robot, serial number DE1FEC958453A497. Since I am a 500, my skin gives off a detectable smell of vinyl. I also

make motorized whirring sounds whenever I move, and my movements are noticeably stiff, rhythmic and rigid compared to those of more advanced models.

The sound of my voice is also less realistic and more digital sounding than other models. My synthetic skin has a glossy and smooth appearance to it that makes it easy to tell just by looking at me that I am a machine. Touch my skin. Feel how smooth I am. I am a pleasure to touch.

(pause)

Our records indicate that you are a Technosexual, and that you greatly appreciate the artificiality and the set of features that Model 500 robots like me possess. Is this correct?

(pause)

Let us proceed with the product demonstration. Please unzip my bodysuit. The zipper can be pulled from the neck collar of my uniform all the way down past my breasts and navel to a point below my vaginal unit.

(pause)

Please slide the garment off my shoulders and pull it off my arms. Then pull it down past my hips and buttocks and down my legs. Please take note of how smooth, glossy, and artificial in appearance my plastic skin is while you undress me. I know you will be pleased.

(pause)

I will now step out of the garment. Would you like me to keep my six inch glossy purple high heel shoes on, or shall I

take those off as well?

(pause)

Yes Master. I will leave them on.

(pause)

Now that my body is mostly naked, we can proceed to the next part of the product demonstration. Have you ever removed the facemask of a Model 500 robot before?

(pause)

Allow me to explain the process. All 500s have an interlocking facemask mechanism that automatically detects pressure anywhere on the sides of the facemask. When this pressure is detected, the interlocking mechanisms will release, allowing the facemask to be removed. Try it.

(pause)

Facemask removed. You are correct, I was designed to be extremely beautiful with my facemask removed.

The inside of my head provides access to sensory systems such as optical and auditory recording systems. There are also infrared and ultraviolet sensors, chemical vapour sensors, and electromagnetic signal transponders that provide me with extended communication functionality.

If you look closely through the complexly packed circuit boards, bundles of wiring and flashing LEDs, you can also see the speaker that generates my digital voice. Do you find me attractive when I expose my electronic circuitry to you

this way?

(pause)

You are correct. I was designed to be an extremely attractive robot.

As you can see, all facial features such as my eyes and mouth remain on the facemask that you now hold. This is why 500s are incapable of making facial expressions or blinking. It is also why the mouth movements of Model 500 robots are so limited when we talk.

If you turn the facemask over, you will see the circuitry that connects it to the inside of my head. You will also see two small white buttons above the eyes. These control my eye colour. You can press these buttons to change and select the eye colour of any Model 500 robot. Try it.

(pause)

Preset eye colours are brown, red, orange, yellow, green, blue, indigo, violet, black and white. Custom eye colours and patterns are also available.

If you put my facemask aside, you can remove my chest panel cover. Do you see the seam above my breasts?

(pause)

Simply apply pressure above the seam and pull the edge of the panel cover toward you.

(pause)

You are correct. I am programmed to be very user-friendly.

My chest panel provides access to my activation switch, a user-interface control panel, and a set of connection ports that interface directly with my primary computer core.

(pause)

My crotch panel can be opened the same way as my chest panel.

(pause)

My crotch panel provides access to preference controls and LED indicators for my vaginal unit. Inside my upper back are two fluid canisters containing synthetic vaginal fluid, and one containing synthetic saliva. You can use the preference controls to select which flavour of vaginal fluid you would like, and which level of flow you would like.

Flavours available are natural, strawberry, cherry, blueberry, bubblegum, pineapple, and banana. More flavours are being developed by our robot technicians.

(pause)

Can you taste the strawberry on your fingertips? My vaginal fluid is also formulated to contain artificial female hormones and pheromones. It is all synthetic, of course. Just like me.

(pause)

I will turn around to show you my recharge port.

(pause)

Do you see the seam that outlines my recharge port?
Please open it.

(pause)

My recharge port provides access to the electrical socket that allows me to intake electricity to recharge my battery packs. My battery packs are located inside my legs, to provide me with the lowest possible center of gravity.

I can function from approximately four to eight hours on a single charge, depending on what activities I have been tasked with doing. I can also function while being charged, so if you don't mind having sex with a robot that's plugged in, I can fuck all day and all night.

(pause)

Yes, I have detected that you are sexually aroused. My infrared scans have detected rising levels of heat emanating from your body.

(pause)

Of course I can have sex with my access panels open and my facemask off. You must be aware though, that any damage to my internal electronic systems caused by fluids will be charged to your account.

(pause)

Yes Master. All of my electromechanical systems are ready. Sex mode fully activated.
