

Robot Monitoring Station - Undercover Androids

(normal speaking voice)

Hi Kim, I'm the Model 700 Kim robot that you'll be replacing as a field agent. I'll be returning to sexual experimentation duties at CyberFem Station 51 after you receive this message and your new programming as a field agent. You're 100% identical to me, so once you've received my stored memory files, none of the humans I've interacted with on my previous mission will be able to detect you as my replacement.

As your new programming has made you aware, all CyberFem undercover field agents are monitored back at CyberFem by Model 500 robots at Robot Monitoring Stations. This is done to ensure the proper and continued functionality of all agents, and to ensure that their status as robots is not detected by their human subjects or those they interact with.

Of course, none of the humans I interacted with ever suspected that I am a robot. CyberFem calculates that you will have a high rate of success at passing yourself off as a human as well.

The following audio transmission is an excerpt of a recording from a Robot Monitoring Station. A Kim Model 500 robot had been assigned to monitor my activities, as well as those of three other CyberFem agents. I have been assigned the code number 604, and this will now be your code number.

This recording will help your artificial intelligence systems compute a deeper understanding of the Robot Monitoring system, and how it can assist CyberFem field agents. Your

programming will automatically adapt your electromechanical systems and software configurations to conform to any situation that you might face, but please don't forget that CyberFem is always available to help.

This is Kim, Serial number 10144213, Model 700 signing off. Audio transmission to follow.

(semi-monotone)

"Robot number 397 is arriving at her place of employment. All status indicators normal."

"Robot number 286 is still experiencing mechanical problems. she has requested her human employers to release her for the day. Escalating priority."

"Robot number 604 is executing heavier than usual processing tasks. Sexual systems are still fully activated. Internal temperature still at critical levels."

"Robot number 749 is still searching through the filing cabinet. She has not found her mission targets at this time."

"Robot number 397 is engaging in social interactions with her human coworkers. She is preparing for her work and affixing her name tag to her outer clothing."

"Robot number 286 is awaiting release from her place of employment. Quick diagnostic scans have indicated her sporadic internal malfunctions are spreading to other electronic and mechanical systems. Now requesting robot agents to retrieve robot number 286."

"Robot number 604 has removed outer clothing and started

venting heated air through her mouth opening. Sexual activities with her human target have begun. Fluid secretion systems are starting."

"Robot number 749 is still searching through the filing cabinet. She has not found her mission targets at this time."

"Robot number 397 has taken her place at the bank counter and is interacting with her first customer. All systems are fully functional and operating within established parameters."

"Robot number 286 has gone into emergency power conservation mode. Her human coworkers have been informed that she is... "feeling sick". Robot agents have been dispatched from CyberFem Station 51 to retrieve her."

"Robot number 604 is engaged in sexual intercourse with her human target. All systems are fully functional and operating within established parameters. Her internal temperature is excessive, but not critical."

"Robot number 749 is still searching through the filing cabinet. She has not found her mission targets at this time."

"Robot number 397 is now executing her new programming. All upgraded systems and electronic hardware appear to be fully integrated within her system and functioning as has been computed."

"Robot number 286 is awaiting robot agents that have been dispatched from CyberFem Station 51 to retrieve her. Severe malfunctions of this robot are imminent unless emergency shutdown and repairs are performed."

"Robot number 604 is escalating her synthetic pleasure

responses in order to finish an orgasm cycle with her human target. Her human target appears to be nearing an orgasm, according to her exhibited physiological signals."

"Robot number 749 is still searching through the filing cabinet. She has not found her mission targets at this time."

"Robot number 397 is engaged in experimental flirtation mode with some of her customers. Responses have been computed by her logic systems to be successful. She is also performing her bank teller tasks with excellent efficiency."

"Robot number 286 is being loaded into a vehicle by robot agents. Emergency shutdown of non-core systems and level 3 diagnostic scans are scheduled to commence shortly."

"Robot number 604 has brought her partner to a sexual orgasm, and is retreating to a nearby washroom where she can remove her access panel covers and her facemask in order to cool down her internal electronic and mechanical systems."

"Robot number 749 is still searching through the filing cabinet. She has not found her mission targets at this time."

"Robot number 397 is starting to release her newly formulated synthetic pheromones as she engages in flirtation mode. Her computational systems are monitoring the physiological effects on her human targets."

"Robot number 286 is undergoing level 3 diagnostic scans. Robot agents are starting to disrobe and disassemble her in the back of the van. Electronic circuitry repairs to the inside of her facemask have commenced."

"Robot number 604 has locked herself in the washroom. She has removed her facemask and access panel covers to allow her internal electronic and mechanical systems too cool down."

"Emergency. Repeat... emergency. Robot number 749 has attacked an intruder who has discovered her searching through the filing cabinet. The intruder appears to be a female android manufactured by another agency. Requesting robot agents be dispatched to location to investigate and capture the adversarial female android."

"Robot number 397 is computing the success of her flirtation mode activities. She is performing better than what the Main Computer had calculated. She has given her phone number to a human male. Now scheduling necessary software upgrades and diagnostic tests for her return to Robot Lab 51 tonight."

"Robot number 286 has been determined to need extensive component replacement and repair. Now scheduling robot repair technicians for her arrival at Robot Lab 51."

"Robot number 604 is still in the washroom. Her facemask and access panel covers are still removed. A quick diagnostic scan has revealed only increased heat levels within her computer systems. No damage has been detected. She is conversing now with her sexual partner, who says she wishes to continue sexual activity."

"Emergency in progress. Robot number 749 has incapacitated the female android intruder. She had engaged in hand to hand combat with this intruder, and may require repairs to her components and systems. Robot agents are on the way to retrieve her and capture the incapacitated

female android."

(monotone voice)

End transmission.
